Summary

Software engineer with 4+ years of backend and full-stack experience across fintech, SaaS, and e-commerce. Builds Ruby on Rails applications and Python-based AI agents, with experience in production troubleshooting, performance optimization, and AI-powered observability at PayPal.

Technical Skills

Languages: Ruby, Python, JavaScript, SQL, Bash

Frameworks & APIs: Ruby on Rails, FastAPI, Pydantic, Flask, React, Angular, Hotwire, Turbo, Stimulus, ActiveRecord, SQLAlchemy, REST APIs

Agentic AI: LangGraph, FastMCP, MCP, Retrieval-Augmented Generation (RAG), LLM Tools, Context Management

Databases & Search: PostgreSQL, MySQL, Elasticsearch

Infrastructure & CI/CD: AWS EC2, Docker, Dokku, GitHub Actions, Git

Testing & Performance: RSpec, Minitest, pytest, Mocking, Cypress, SQL query optimization, performance profiling

Experience

PayPal

Software Engineer

Austin, TX · Jan 2026 - Present

- Built a Slack-integrated troubleshooting agent in Python using LangGraph for multiple PayPal products, mapping Slack threads to LangGraph conversations to preserve follow-up context and support L1 engineers' initial incident analysis.
- Implemented LLM-based intent routing to distinguish how-to questions from incident-triage requests; built a FAQ RAG pipeline and integrated internal documentation through Atlassian MCP to answer how-to questions.
- Scaled triage workflow selection as the library of standard operating procedures (SOPs) grew, replacing predefined keyword matching with a dedicated RAG pipeline that matches questions to SOP descriptions and invokes selected procedures through MCP tools.
- Integrated the Hyperwallet agent into a platform dashboard, collaborating with dashboard owners to document business meanings of metrics and define the client-to-agent JSON payload and descriptive schema.
- **Reduced LLM token consumption by ~50%** by storing dashboard datasets in conversation-scoped LangGraph state, passing only their descriptive schema to the LLM, and using FastMCP tools to retrieve question-relevant data slices instead of sending the full payload.
- Generalized the client-to-agent schema and data interface, extending the integration to a second Hyperwallet dashboard for Know Your Customer (KYC) lifecycle analysis.
- Diagnose Hyperwallet production issues, perform root-cause analysis, and collaborate with engineering and product teams to improve platform reliability.

Software Engineer Intern

Austin, TX · May 2025 - Aug 2025

- Built a conversational troubleshooting proof of concept system using MCP and AI agents, enabling engineers to invoke predefined SOP workflows through natural-language interactions.

LSU BrBytes Lab

Research Assistant

Baton Rouge, LA · Feb 2024 - May 2025

- Improved website accessibility to meet WCAG AA standards; redesigned teacher portal features and APIs, automated production builds with Docker, and migrated templates from EJS to Nunjucks, resulting in a fully compliant and faster-loading portal.
- Mentored and onboarded undergraduate students and reviewed pull requests to maintain code quality.

Fetchly Labs

Software Engineer

Nepal · Oct 2023 - Dec 2023

- Built Ruby on Rails APIs and a drag-and-drop interface for Spheric HR's hiring workflow; resolved production issues.

Restarone Solutions Inc.

Software Engineer

Nepal · Apr 2022 - Oct 2023

- Led technical scoping and development of industry-specific onboarding flows for Copper CRM, mapping each client's industry to a predefined sequence of information collection pages and product tours.
- Optimized a Ruby on Rails analytics dashboard by moving aggregation into SQL and reducing ActiveRecord object loading, **reducing allocated objects by ~92% from 4.03M to 341K in production profiling of a one-year analytics view.**
- Migrated test environments from Heroku to Dokku on Amazon EC2, using GitHub Actions to automate deployments and create temporary application environments for testing pull requests, with automatic cleanup when pull requests are closed.

Trip101

Jr. Software Engineer

Nepal · Jan 2021 - May 2022

- Integrated third-party travel and accommodation APIs (Expedia, Sonder) into a Ruby on Rails application, built a CMS with admin features, and migrated a JavaScript microservice to React, which enabled the team to release new travel packages more quickly.

Bajra Technologies

Associate Software Engineer

Nepal · Jan 2020 - Sep 2020

- Built e-commerce backend features and data workflows in Ruby on Rails; implemented Elasticsearch fuzzy search, filtering, and aggregations, which improved product search relevance and helped users find items faster.

Education

M.S. Computer Science

Jan 2024 – Dec 2025

Louisiana State University

- GPA: 4.0 / 4.3

B.E. Computer Engineering

Oct 2015 – Sept 2020

Tribhuvan University, Pulchowk Campus
